Learning model

Course manager on iTunes U

There are two ways:

- a course for manager of similar project where people find the format about a new formative route. In this option there are all steps about our project.
- a course for students where they could find theory and practice guidelines about hybrid and electric technologies.

Why?

Because we can introduce all multimedia products and the people can follow it everywhere and everytime. The people can follow it by tablet or smarthphone (iTunes U for Apple and Tunesviewer for other Android dispositives).

We will insert in a test area because we have to verify the skills level

Development of the guideline

There are some changes in our project: during the meeting with enterprises, we encounter problems regarding kart's components in our country.

Specialy in the first electrical connection we have got some problem about find software control.

We start building a pure electric kart and than we proced assembling hybrid kart with series connection.

We change the pflichtenheft after sharing the problems with students and enterprises in a problem solving process.

... software control.

Multimedia documentations

We think that social networks are very important because they allow relations, to share new ideas and e-learning.

Social products:

- facebook page allows comments, sharing, like
- blog is a a diary that allows comments
- course manager allows chat, forum, sharing
- e-book allows sharing
- youtube channel allows sharing
